(*) As originally adopted, lottery receipts were deposited to a special fund (the Lottery Proceeds Fund established by the State Constitution) that had no specific uses enumerated. For FY 91-92 and FY 92-93 lottery receipts were appropriated to support the operations of numerous state agencies, local allocations, and the state general fund. For the 1993-94 fiscal year, most lottery receipts (\$140 million) were appropriated to the Minimum Foundation Program (MFP, K-12 education funding) and a like amount of state general fund support was removed from MFP financing. Lottery receipts have been appropriated to the MFP ever since. Act 1305 of the 2003 session amended the State Constitution to formally dedicate lottery receipts to the MFP beginning with FY 04-05 (including a maximum of \$500,000 to compulsive and problem gaming services). Act 646 of the 2014 Regular Session required the Lottery Corp. to transfer an additional \$9 million from reserves for deposit into the Mega-Project Development Fund. Act 121 of the 2015 Regular Session required an additional \$5.9 million transfer from reserves and \$20 million from unclaimed prizes, both for deposit into the Lottery Proceeds Fund supporting the MFP.

The table above portrays spending by players engaged in each form of gaming on a comparable basis. Each estimate represents the amount of spending by players, in the aggregate, that is actually kept (or won) by gaming operators in an annual period, and is the operators gross gaming revenue from which business expenses are paid. Thus, each estimate is also the amount of losses that players incur in the aggregate each year, and is net of any rewagers. As such, the table is an estimate of the net economic flow of spending from players to gaming operators each year.

SHARE OF TOTAL ECONOMIC GAMING SPENDING EACH ACTIVITY COMPRISES
